Calculating Volumes of Soil For Your Garden

Your garden composition is best at:

- 1/2 soil from your yard or sandy loam topsoil for a raised bed
- 1/4 Landscape Mix
- 1/4 compost (BTN Cotton Burr Compost)

To calculate volumes, take length x width x depth

Example:

8'x3'x2' (size of garden) = 48 cubic feet material needed in a raised bed

24 cubic feet sandy loam (almost 1 cubic yard), 6 landscape mix, 6 cotton burr compost

Notes:

27 cubic feet to a cubic yard

2 cubic feet per bag of landscape mix and cotton burr compost

To enrich soil from year to year, add BTN Nature's Blend before planting your new garden each season
